CITS2402 Introduction to Data Science - Face to face / Blended learning

Unit Information

Unit Code	CITS2402
Title	Introduction to Data Science - Face to face / Blended learning
Level	2
Faculty	Physics, Mathematics and Computing
School	Physics, Mathematics and Computing
Unit Coordinator	Ghulam Mubashar Hassan
Credit Points	6 points

Academic Information

Content	Data is ubiquitous in modern society. It is used to monitor the economy, inform business decisions, understand how the environment is changing, and communicate public health messages. Data science is a booming field that harnesses raw data and turns it into actionable knowledge. Data Scientists develop and employ tools to collect, understand and communicate data and its meaning. They are able to identify trends, understand demographics and inform interventions. They are able to work across disciplines, from science to business, health, media and politics. But data can also be misused, and a professional Data Scientist will understand the ethical demands of responsible use of data. This hands-on unit provides practical experience, using the programming language Python, for solving real-world data science problems, from acquiring data from public sources, to understanding the data through analysis and modelling, to visualising and presenting the results.
---------	--

Unit Learning Outcomes	#	Outcome			How outcome will be assessed
	1	understand and implement the stages in the data science lifecycle, from data acquisition and cleaning through to analysis, modelling and visualisation			mid-semester test; final examination
	2	independently research, solve and communicate results for real-world data science problems from across a range of disciplines			mid-semester test; final examination
	3	demonstrate a command of computational structures and operations, and discuss the relevant efficiency and storage implications of alternative solutions			project; final examination
	4	utilise appropriate encoding and visualisation methods for different types of data, including categorical, numerical and time-series data			mid-semester test; project; final examination
	5	understand the power of data used well or used poorly, and critically assess the way data is used and presented in business, science, the media and the wider community			project; final examination
	6	recognise and discuss the ethical responsibilities of a data scientist			project
Indicative Assessment	#	Assessment	Indicative weighting	Failed component	
	1	mid-semester test	20%	0	
	2	project	30%	0	
	3	final examination	50%	0	
The indicative assessment structure provides an overview of how this unit is typically assessed. In order to fit teaching requirements, this may change slightly from year to year.					
Required Assessments	Unit grades are determined from final unit marks in accordance with the UWA Policy (http://www.governance.uwa.edu.au/procedures/policies/policies-and-procedures?method=document&id=up15/5), on Assessment				

Contact Details

Unit Coordinator Contact Information	
Name	Ghulam Mubashar Hassan

Email	ghulam.hassan@uwa.edu.au
Phone number	+61 8 6488 7228
Room number or location	CSSE 2.12
Consultation information	Tuesdays 2 - 3 pm (Teaching Weeks)

Unit Details

CITS2402 - CITS2402_SEM-2_2026 - SEM-2-2026 - 2026 - Face to face / Blended learning

Unit Information

In this unit, students will explore the data science cycle and its key considerations, including ethics and privacy. They will also gain hands-on experience using Python for data manipulation, cleaning, visualisation, and exploratory data analysis. Programming/coding skills are essential and will be developed during the unit. This unit provides an introductory exploration of data science using Python, focusing on relevant libraries and techniques. Topics include:

Python Libraries for Data Science: An introduction to key libraries such as Pandas, NumPy, and Matplotlib, highlighting their roles in data analysis.

Exploratory Data Analysis (EDA): Techniques for summarising and visualising data sets, and identifying important questions about the data using EDA methods.

Data Types and Structures: Understanding different data types, including tabular data, time series, and their specific applications in data science.

Data Preparation: Introduction to types of missing values, and preparing data for analysis.

Practical Applications: Case studies and projects that reinforce learning through real-world data sets and scenarios.

Lecture Capture System

In accordance with UWA's policy on lecture capture all lectures* in enabled venues will be recorded and made available to stream and download by enrolled students via the Lecture Capture System (LCS) for the duration of the unit (including Supplementary and Deferred Examinations period).

* Please note that in some limited circumstances lectures may not be recorded due to: ethical and/or security related issues; the use of commercially sensitive material; the use of third-party copyright teaching material; or culturally sensitive content. Students will be advised, in advance, when this applies.

Learning And Teaching Strategy

The unit is divided into two parts: lectures and labs. The face-to-face (F2F) lectures will be recorded and available on the university system. The recordings are not a substitute for the F2F lectures. The students should be aware that the recording system can fail. There is no guarantee that the video or the audio will be recorded and available in the system. The lectures are to present the content of the unit and provide examples. The labs are Q&A sessions focusing on using programming exercises to develop the student's problem-solving abilities. The problems are related to what was discussed in the lectures, but may also introduce new content. The lab sessions are drop-in sessions, and the students can attend any (or all) sessions they wish. The lab session is not mandatory. Facilitators and the unit coordinator will attend the lab sessions to support the student learning experience. The facilitators will not provide solutions to the problems but support the students in their learning process. The teaching and learning strategy is based on presenting the content to students (lectures) and then working on solving problems using programming skills (labs).

There is other information on LMS. The LMS is regularly updated, therefore keep an eye on all the new information. Please read all details and content, watch all the lectures, and do the labs and the assessments of the unit.

Our expectation is that this unit will require up to 10 hours of time commitment per week on average. The lectures are in a traditional slide/discussion, and the students will practice and develop their code skills in the labs.

Unit Structure

Unit Structure:

This unit is an On-Campus (OC) unit, that is, the activities are F2F (face-to-face) at UWA.

Lectures: We have one face-to-face lecture per week. See the UWA timetable to find out when they happen and their venues.

Labs: The face-to-face labs sessions start on Week 2 (there is no lab session in the first week). The students can go to any (or all) sessions they want. See the UWA timetable to find out when they have and their venues.

Consultation time: There is one hour per week. The consultation time happens only during the teaching weeks. See the LMS to find out when they happen and their venues.

ASSESSMENTS:

This unit has two forms of assessment: practical and exam.

- Quizzes (20%)
- Project (20%)
- Final exam (60%)

These assessments are different ways to measure the student's knowledge of the unit content. Please refer to the Unit Calendar for the relevant dates of the assessments.

Please, keep in mind that the Unit Outline contains "Indicative Assessment" in the "Academic Information" of the unit. As it suggests, it is only indicative. We will follow the assessment indicated above, also included in the Unit Outline.

Quizzes

Programming exercises and conceptual questions to be assessed during the semester. There are ten online quizzes and one face-to-face mid-semester quiz. Online quizzes will start from week 2. Please, refer to the LMS relevant page ("Assessments/Quizzes") for instructions.

Quizzes Exceptional Variation of Assessment (EVA)

There are no EVA for online quizzes. Following the UWA assessment policy, the top 8 of your online quiz marks will be used to calculate your overall result for the online quizzes. Moreover, there is no late submission for online quizzes.

There is no deferment for mid-semester quiz.

Project

The project will test the student's understanding of unit content and ability to produce practical implementations related to data science. It is based on lecture material and extra information/material relevant to that project. The project aims to assess the student's ability to use the unit concepts to solve a problem, work in a team environment and it is expected they require further exploration of the unit content. The lab sessions will support and advise you to complete your project (but not providing solution).

You will have around 5 weeks to do your project. The submission of the project will be via LMS. Detailed instructions are in the corresponding LMS folder, please read them.

Project EVA

The only extension allowed for the project is when the team of students have evidence that they have been unable to attempt it for all four 4 days (96 hours) before the project's submission date. The team of students is given around 5 weeks to do the assignment. If they leave it to the last minute and are then unable to complete it, then that is a risk outcome they have realised. The risk control is to do the project early in the 5-weeks period.

If students present evidence that they were unavailable for all 4 days (96 hours) before the project deadline and are granted an extension, then the extension will be applied as no more than a 7-days extension. If an extension is not possible or exceeds the seven days, then the EVA will be applied as an exemption. and the (mark) weight of project will be added (reassigned) to the (mark) of Final Exam.

Feedback on project will be provided after the deadline for all students and after late submission has passed.

Final Exam

It will be face-to-face, written, closed-book. It may be composed of multiple-choice, coding and open questions. It will assess the student's knowledge of the unit content.

Important: Pay attention to your LMS submissions

For quizzes and assignments, students can do multiple submissions until the deadline, but only the last submission of the assignment is marked.

If an assignment or quiz is not opened and attempted, they cannot be opened later in LMS for revision and other purposes. If the assignment/quiz is opened, filled, and not submitted, it will get a zero mark (we cannot submit it on the student's behalf). Only the last submission of the assignment/quiz is marked. If you have made a prior submission and started a new one (even by mistake), you must fill in all the answers again and submit your assignment/quiz (note that the system will not recover your

previous attempt). If you fail to do that, your assignment/quiz will get a zero mark. These are functions of the design of LMS. Project/quizzes not submitted will get a zero mark.

Important: Quizzes and assignment instructions

Always follow the project/quizzes instructions. One important aspect of our unit is the correct use of the computer (software). We may know how to do it (solve the question, do a data analysis), but if we don't use the computer properly, we will almost surely make an error that will lead to a wrong analysis (result). Computers do not understand misspellings, rounding problems, and other details, and as such, we are covering this in the unit and the project/quizzes. Keep in mind that "TRUE" and "TREU" can be due to a misspelling, but for the assignments/quizzes, misspellings are considered as wrong answers. Also, be aware that some questions are case sensitive; that is, "TRUE", "True", and "true" are different answers. For numerical answers, a "small" difference of 0.001 is not a "small" difference, but, unless you found a different correct solution to an exercise, this is an error. You will find in the assignments questions where you can find a "close" answer to the correct one, but the solution is wrong. That is, there is no "small" difference or "close" answer. You have the correct approach and solution or not.

Important: Review of marks

Once the assessment marks are released, the students are responsible for checking them. If there is a possible mistake in the mark, the students should email the UC using cits2402-pmc@uwa.edu.au to review their assessment no later than 7 days after the marks are released. After this period, the assessment (and marks) will not be reviewed. When requesting a mark review, you have to follow the instructions below:

1) You need to provide an argument to have your marks reviewed. Otherwise, it is not possible to review them. Arguments like, but not limited to, "I think I deserve more marks for the question", "I don't agree with the results. Please review my final exam", and "I am not happy with my final marks. Please review it," "This is my final unit, I cannot fail it, please review my marks," or "If I fail this unit, the consequences will be drastic to me, please review my marks" will not be considered valid arguments. You must clearly specify what (question/item/etc.) in your assessment you understand that you have provided a correct answer and the reason for why you understand that (based on the unit content). Then, your marks will be reviewed, and the appropriate measures will be taken if you are correct. If your reasoning is incorrect, then it will be explained why. Similarly, typos, misspelling, rounding, "close answer", and others are considered wrong answers. Always check the assignment/quiz instructions and follow them. Failing to follow assignment instructions can lead to wrong answers.

2) Be aware that mistakes in marks are not common, but they may happen. However, mistakes in marks are not limited to receiving fewer marks than you deserve. It is possible that you received more marks than you deserve, and in this case, fixing your marks may result in a lower mark than you currently have. Then, read the results of your assessments carefully. Check all your answers and the marks that you earned. A mark review entails a comprehensive review of the entire assessment, not just the specific question you're questioning. This means that your mark can change in either direction; for example, if you're earning more marks in a question than you should.

3) After the email discussion, if necessary, a face-to-face (F2F) meeting may be scheduled with the student to discuss the marks. Please note that if you come to my office without following the steps above and without having an appointment scheduled, you will not be attended to. It's important to follow the process to ensure fairness and transparency for all students.

Important: UAAP and EVA requests

If you have an approved UAAP and wish to use it, please send it to cits2402-pmc@uwa.edu.au. It will be easier to manage and apply the necessary adjustments if we know the conditions sooner. If you are granted exceptional variation of assessment, please send it to cits2402-pmc@uwa.edu.au. Even if the UWA says that the students do not need to inform the unit coordinator, please inform. The unit coordinator is not automatically informed about exceptional variation of assessment; if you do not inform us, we may be unable to take the appropriate measures.

Please, also note that:

* An approved UAAP will follow the rules applied to EVAs and late submissions above.

*** More details on late submission, penalties, and EVAs are in the relevant UWA pages in your LMS and in the unit outline.

Required Assessments

Assessment #	Assessment Task	Weight	Assessment period/date/s	Submission Procedure	Unit Learning Outcome	Waiver
--------------	-----------------	--------	--------------------------	----------------------	-----------------------	--------

1	Quiz 1	1	27/7 09:00 AM - 07/8 11:59 PM	Via LMS	1-6	No
	Quiz 2	1	03/8 09:00 AM - 14/8 11:59 PM	Via LMS	1-6	No
	Quiz 3	1	10/8 09:00 AM - 21/8 11:59 PM	Via LMS	1-6	No
	Quiz 4	1	17/8 09:00 AM - 28/8 11:59 PM	Via LMS	1-6	No
	Quiz 5	1	24/8 09:00 AM - 04/9 11:59 PM	Via LMS	1-6	No
	Quiz 6	1	07/9 09:00 AM - 18/9 11:59 PM	Via LMS	1-6	No
	Quiz 7	1	14/9 09:00 AM - 25/9 11:59 PM	Via LMS	1-6	No
	Quiz 8	1	21/9 09:00 AM - 02/10 11:59 PM	Via LMS	1-6	No
	Quiz 9	1	28/9 09:00 AM - 09/10 11:59 PM	Via LMS	1-6	No
	Quiz 10	1	05/10 09:00 AM - 16/10 11:59 PM	Via LMS	1-6	No
	Mid-semester quiz	12	08/9 06:00 PM	Via LMS	1-6	No
2	Project	20	17/8 08:00 AM - 02/10 11:59 PM	Via LMS	1-6	No
	Final Exam	60	25/10 12:00 AM - 08/11 11:59 PM	Via LMS	1-6	No

- For all coursework assessments submitted through LMS, the deadline for submission is standardised at 23:59 (11:59pm) AWST, in accordance with the University's Policy on Assessment, unless students are advised otherwise via the unit outline or other formal written communication to students in this unit.
- In accordance with the University Policy on Academic Integrity, the use of Artificial Intelligence (AI) is permitted as an educational/study tool. It may only be used in any assessment within a unit where approval has been granted by the unit coordinator. Improper use of AI-generated material, as set out in the Academic Integrity policy, in assessments may lead to the occurrence of academic misconduct.

Unit Schedule

Week #	Date Starting	Topic	Preparation	Assessment	Notes
1	20/07/2026	Unit Admin Introduction to the Data Science	21/07/2025 - Material of Week 1 lectures will be available		No lab in Week 1
2	27/07/2026	Pandas, Numpy, Data Wrangling	28/07/2025 - Material of Week 2 lectures will be available; Week 2 Lab material will be available.		
3	03/08/2026	Exploratory Data Analysis	04/08/2025 - Material of Week 3 lectures will be available; Week 3 Lab material will be available.	Quiz 1 due Friday 11:59pm	
4	10/08/2026	Guest Lecturer	11/08/2025 - Material of Week 4 lectures will be available; Week 4 Lab material will be available.	Quiz 2 due Friday 11:59pm	
5	17/08/2026	Clustering	18/08/2025 - Material of Week 5 lectures will be available; Week 5 Lab material will be available.	Quiz 3 due Friday 11:59pm	

6	24/08/2026	Learning Models and Optimization	25/08/2025 - Material of Week 6 lectures will be available; Week 6 Lab material will be available.	Quiz 4 due Friday 11:59pm	
7	07/09/2026	NO LECTURE (due to mid-semester quiz)	Week 7 Lab material will be available.	Quiz 5 due Friday 11:59pm Mid-Semester Quiz Tuesday 6-8pm	
8	14/09/2026	Privacy and Data Regulations	15/09/2025 - Material of Week 8 lectures will be available; Week 8 Lab material will be available.	Quiz 6 due Friday 11:59pm	
9	21/09/2026	Data Science Ethics	22/09/2025 - Material of Week 9 lectures will be available; Week 9 Lab material will be available.	Quiz 7 due Friday 11:59pm	
10	28/09/2026	Guest Lecture (industrial aspects of Data Science)	29/09/2025 - Material of Week 10 lectures will be available; Week 10 Lab material will be available.	Quiz 8 due Friday 11:59pm Project due Friday 11:59pm	
11	05/10/2026	Professional Data Science	06/10/2025 - Material of Week 11 lectures will be available; Week 11 Lab material will be available.	Quiz 9 due Friday 11:59pm	
12	12/10/2026	Final Exam Discussion	13/10/2025 - Material of Week 12 lectures will be available; Week 12 Lab material will be available.	Quiz 10 due Friday 11:59pm	

Participation

You should attend all lectures, do the lab sheets/quizzes, and submit your project.

There are 12 lectures weeks. Labs will start from Week 2.

Unit has no compulsory attendance except mid-semester quiz. It is highly recommended that you should attend all lectures. If you need support/help, you must attend lectures, labs and consultation time. The F2F lectures will be recorded and available on the university system. The recordings are not a substitute for the F2F lectures. The students should be aware that the recording system can fail. There is no guarantee that the video or the audio will be recorded and available in the system. The labs are not recorded.

Essential Textbooks

There are no essential textbooks set for this unit. There may be essential and recommended readings set for this unit available in Unit Readings in the LMS.

Other

Contact Information

All questions related to CITS2402 should be emailed to cits2402-pmc@uwa.edu.au. You should not send emails directly to the unit coordinator's personal email account.

The necessary software for this unit is available on UWA UniApps (<https://uniapps.uwa.edu.au/> (<https://uniapps.uwa.edu.au/>)). There is also information about the software used, including some installation guides, in your unit's LMS. If desired, installing the necessary software on personal computers is the student's responsibility. We are not responsible for any issues with students' personal computers or software. There are instructions in the LMS relevant folder about software installation. They work as a guide.

Late submission of Assignments

A penalty of 5 per cent of the total mark allocated for the assessment item is deducted per day for the first 7 days (including weekends and public holidays) after which the assignment is not accepted.

For the first two days there will be a penalty waiver, which means that if you submit within that 48 hours period, the assessment will be marked late but the late penalty will not be applied. Please note: group assignments are exempt from 48 hour waiver

After 48 hours, the accrued penalty will apply, i.e. a 15% deduction will be applied on Day 3 (after 48 hours), with an additional 5% per day after that (to day 7).

Penalty for exceeding word limit

Where a submitted assignment exceeds the word limit, a penalty of 1 per cent of the total mark allocated for the assessment task applies for each 1 per cent in excess of the word limit, or the marking ceases once the word limit is reached.

Academic conduct

Academic Integrity is defined in the [University Policy on Academic Integrity \(https://www.uwa.edu.au/policy/-/media/Project/UWA/UWA/Policy-Library/Policy/Student-Administration/Academic-Integrity/Academic-Integrity-Policy.doc\)](https://www.uwa.edu.au/policy/-/media/Project/UWA/UWA/Policy-Library/Policy/Student-Administration/Academic-Integrity/Academic-Integrity-Policy.doc) as "honest, ethical and responsible scholarship". UWA expects the highest degree of academic conduct from all students.

Penalties for breach of academic conduct vary according to seriousness of the case, and may include the requirement to do further work or repeat work; deduction of marks; the award of zero marks for the assessment; failure of one or more units; suspension from a course of study; exclusion from the University; non-conferral of a degree, diploma or other award to which the student would otherwise have been entitled.

Students should familiarise themselves with the information and resources available regarding [academic conduct and ethical scholarship \(https://www.uwa.edu.au/library/Find-resources/ACE\)](https://www.uwa.edu.au/library/Find-resources/ACE) at UWA.

Exceptional Variation of Assessment

If your study has been impacted by significant factors beyond your control you can apply for Exceptional Variation of Assessment. Significant circumstances may include but are not limited to:

- Short-term health condition or exacerbation of ongoing condition
- Hardship or trauma
- Unavoidable commitments
- Elite athletes / coaches or Performers
- Bereavement

For further information please visit the [webpage \(https://www.uwa.edu.au/students/your-studies/exceptional-variation-of-assessment\)](https://www.uwa.edu.au/students/your-studies/exceptional-variation-of-assessment).

Review and Appeal of Academic Decisions Relating to Students

The full regulations governing appeal, and the process procedures are available at [the UWA Policy Library \(https://www.uwa.edu.au/policy?policy=UP07%252F21\)](https://www.uwa.edu.au/policy?policy=UP07%252F21).

Compulsory online modules

UWA has a wealth of resources available to support your learning. These online modules are compulsory for many students:

- Academic Conduct Essentials (ACE) introduces you to the basic issues of ethical scholarship and the expectations of correct academic conduct at university. All students are required to complete ACE in the first semester of their course.

- Communication and Research Skills (CARS) aims to assist you to develop communication and research skills in an academic context and is compulsory for all new coursework students.
- Indigenous Study Studies Essentials (INDG1000) introduces you to the shared learning space that UWA embodies. This learning space includes both western and Indigenous knowledge systems. INDG1000 is compulsory for all students completing a first year undergraduate course.

More information about these units can be found at the [UWA Handbook \(https://handbooks.uwa.edu.au\)](https://handbooks.uwa.edu.au).

Student Rights and Responsibilities

As a UWA enrolled student, you are entitled to have certain expectations met and, in turn, will be expected to uphold certain responsibilities. All UWA enrolled students must understand their rights and responsibilities which can be accessed from the [University Policy Library](https://www.uwa.edu.au/policy/-/media/project/uwa/uwa/policy-library/policy/student-administration/student-right-and-responsibilities/student-rights-and-responsibilities.doc).

(<https://www.uwa.edu.au/policy/-/media/project/uwa/uwa/policy-library/policy/student-administration/student-right-and-responsibilities/student-rights-and-responsibilities.doc>). .

Useful Contacts

Student Guild

The Guild represents all students enrolled at UWA and can help you in a number of ways. For financial, academic or welfare support please email Guild Student Assist at assist@guild.uwa.edu.au (<mailto:assist@guild.uwa.edu.au>). For all other queries email hello@guild.uwa.edu.au (<mailto:hello@guild.uwa.edu.au>) or visit the [UWA Guild website \(http://www.uwastudentguild.com/\)](http://www.uwastudentguild.com/).

University Library

Visit the [University Library \(https://www.uwa.edu.au/library/home\)](https://www.uwa.edu.au/library/home) website to find out about our wide range of services including:

- Our campus libraries – Barry J. Marshall Library, Beasley Law Library, EDFAA Library J. Robin Warren Library and Reid Library – provide a range of individual and group study spaces
- Unit Readings to access your textbooks and recommended readings
- Study and research support through our Library guides and workshops
- OneSearch to access Library collections
- General queries and consultations with our Library staff
- Student IT and printing support

Student Life

There is a wealth of material provided by UWA Student Life that can help you settle into university life and help with many other issues you may encounter as a university student. Visit the [UWA Students website \(https://www.uwa.edu.au/students\)](https://www.uwa.edu.au/students) to see everything that is on offer.

Academic Skills Centre

UWA's Academic Skills Centre provides free academic advice, support and resources for all undergraduate and postgraduate students at UWA. We can help you to develop the writing, research, English language, maths and stats skills you need to excel in your university studies. Find out about drop-ins, consultations, workshops, after-hours advice and online resources on the Academic Skill Centre [website \(https://www.uwa.edu.au/students/your-studies/academic-support\)](https://www.uwa.edu.au/students/your-studies/academic-support).

Student Administration

Student Admin deal with enrolments, fees and other vital services for students. They can be contacted via [their website \(https://www.uwa.edu.au/students/your-studies\)](https://www.uwa.edu.au/students/your-studies).
